Yerevan, Armenia

Senior Backend Developer

Profile

Senior Backend Developer with 6+ years building high-load web applications for 200K+ users. Deep experience in PHP/Laravel, scalable backend architecture, RESTful APIs, MySQL/PostgreSQL, Redis, Docker, and CI/CD. Led a backend team of 6 junior developers and improved feature delivery 5× by standardizing environments, automating testing, and streamlining GitHub Actions pipelines. Built Prometheus/Grafana observability to reduce mean time to detect critical issues from 45 minutes to 5 minutes and cut production errors by 40%.

Areas of Expertise

- PHP
- JavaScript (ES2022+) / TypeScript
- Docker
- Grafana
- Laravel
- MySQL
- CI/CD
- Unit & Integration testing
- RESTful API
- PostgreSQL
- Github Actions
- PHP Unit
- Vue.js
- Redis
- Prometheus

Professional Experience

Skyweb24

Jun 2024 to Apr 2026

Senior Backend Developer

I led the Bitrix24 backend team, owning technical planning, product updates, architecture, and developer enablement for a high-load platform.

- Architected a unified PHP/Laravel core framework and shared component library, increasing backend feature delivery speed by 5×
- Standardized Docker-based development and production environments, eliminating environment-specific bugs and deployment drift
- Introduced GitHub Actions CI/CD and automated testing, reducing production errors by 40%
- Designed Prometheus/Grafana observability for metrics, logs, and traces, cutting mean time to detect critical issues from 45 minutes to 5 minutes
- Established QA, unit, and integration testing practices; led code reviews and mentored 6 junior developers

Middle Backend Developer

Supported SaaS applications for Bitrix24 CRM on Laravel, focusing on backend reliability, performance, and scalability for a high-load platform serving 1M+ requests/day and 200K+ users.

- Maintained stability of a high-load web platform serving 1M+ requests/day and 200K+ users
- Built REST API endpoints to expand core product functionality and support delivery across connected modules
- Introduced a Redis caching layer that reduced database load by 60% during traffic spikes
- Optimized MySQL and PostgreSQL queries across core API endpoints to improve response times and reduce database pressure

Freelance

Sept 2018 to Mar 2023

Full-Stack Developer

- Delivered 50+ backend projects for international clients across e-commerce, fintech, and SaaS, translating requirements into production-ready systems
- Built and integrated REST APIs and payment gateways to support reliable business workflows
- Connected third-party services and external systems to automate data flow and reduce manual operations
- Delivered a high-traffic e-commerce platform processing 5,000+ orders/day, covering product catalog, cart, checkout, order management, and payment integrations
- Developed responsive frontend UIs using JavaScript/Vue.js alongside PHP backends to deliver cohesive full-stack solutions

Education

B.Sc. Software Engineering
Siberian Federal University

Sept 2014 to Jun 2018
